Super Admin Guide

Section 1 — Signing In

1. Choose Admin Access

Super Admin accounts do not use the ordinary username/password form. From the portal landing page, choose Admin Access, then enter the registered 10-digit mobile number. This is the same “Admin Access” card used by the plain Admin role — the backend, not the UI, decides which dashboard a given mobile number lands on.

Admin Access — enter mobile number. (Same OTP flow used by plain Admin.)

2. Enter the OTP

A 6-digit OTP is sent by SMS and is valid for 10 minutes.

Enter OTP screen.

3. Solve the security check and verify

Solve the on-page security check (or use the audio “Listen” alternative), then click Verify & Login.

4. Land on User Management

A successful verification opens directly on User Management.

System	Master Data Manager, Role User Caps, Full MIS Report	Cap Requests, Full MIS Report
Can create Admin accounts?	Yes	No
Sets role user caps directly?	Yes	No — can only request a change

Section 2 — User Management

1. The user list and stat cards

Lists every account in the system with role, department, status and last login. The three cards at the top — Total Users, Active, Inactive — are clickable filters: click one to narrow the table to that status, click again to clear it. A Department dropdown next to Add User further narrows the list to one department.

The screenshot displays the 'User Management' page. On the left is a sidebar with 'ADMINISTRATION' (User Management, All Uploads, Linked Documents) and 'SYSTEM' (Master Data Manager, Role User Caps, Full MIS Report) sections. The top header shows 'Govt Of Haryana Digital Repository', 'Admin > User Management', and a user profile for 'superadmin Super Admin'. The main area features three stat cards: 'TOTAL USERS 87', 'ACTIVE 87', and 'INACTIVE 0'. Below these is a table titled 'System Users' with columns: NAME, USERNAME, ROLE, DEPARTMENT, STATUS, LAST LOGIN, and ACTIONS. The table lists 10 users, including 'tushar sharma' (NODAL OFFICER), 'Vishal Gulla' (NODAL OFFICER), 'Sunil Gagneja' (NODAL OFFICER), 'Madhu Bala' (NODAL OFFICER), 'Sunita Yadav' (NODAL OFFICER), 'Rajkumar Lawania' (NODAL OFFICER), and 'Vikas Kadian' (NODAL OFFICER). Each row has an 'ACTIONS' column with edit and deactivate icons.

User Management — full system user list with stat cards.

2. Table columns

Name (with email underneath), Username, Role (colour-coded badge), Department, Status (coloured dot + label), Last Login, and Actions — an Edit (pencil) button and an Activate/Deactivate button per row.

3. Add a new user — Role and Department come first

Click + Add User to open the “Add New User” drawer. Unlike the plain Admin drawer, the very first two fields are Role and Department — everything else in the form, including the username placeholder suggestion, depends on what is picked here.

The screenshot shows the 'Add New User' drawer on the right side of the screen. The drawer is titled 'Add New User' with a subtitle 'Create a new system account'. It contains several input fields: 'ROLE' (a dropdown menu with 'Select Role' as the placeholder), 'DEPARTMENT' (a dropdown menu with 'Select Department' as the placeholder), 'USERNAME' (a text field with a placeholder 'e.g. Role.Department'), 'EMAIL' (a text field with a placeholder 'user@example.com'), 'PASSWORD' (a text field with a placeholder 'Set a password' and an eye icon), 'FIRST NAME' (a text field with a placeholder 'First name'), 'LAST NAME' (a text field with a placeholder 'Last name'), and 'MOBILE NUMBER' (a text field with a placeholder '10-digit mobile number'). At the bottom of the drawer are two buttons: 'Cancel' and '+ Create User'. The background shows a blurred view of a user management table.

Add New User drawer — Role and Department fields at the top.

This screenshot is similar to the previous one, but the 'ROLE' dropdown menu is now set to 'Admin'. Consequently, the 'USERNAME' placeholder text has changed from 'e.g. Role.Department' to 'e.g. admin'. The 'DEPARTMENT' dropdown remains 'Select Department'. All other fields and the bottom buttons ('Cancel' and '+ Create User') are identical to the previous image.

Role set to Admin — a role only Super Admin can assign.

4. Assigning an Approver — Uploader role only

If Uploader is selected and a Department is chosen, a required Assign Approver dropdown appears, listing active approvers already in that department. If none exist, a warning is shown and an approver needs to be created first.

The screenshot shows the 'Add New User' form. The 'ROLE' dropdown is set to 'Uploader' and the 'DEPARTMENT' dropdown is set to 'Agriculture Department'. The 'ASSIGN APPROVER' dropdown shows 'No approvers in this department' and a warning message: 'No active approvers found for this department. Create an approver first.' The form includes fields for 'USERNAME' (placeholder: e.g. uploader.agriculture_dej), 'EMAIL' (placeholder: user@example.com), 'PASSWORD' (placeholder: Set a password), 'FIRST NAME' (placeholder: First name), 'LAST NAME' (placeholder: Last name), and 'MOBILE NUMBER' (placeholder: 10-digit mobile number). The form has 'Cancel' and '+ Create User' buttons.

Assign Approver dropdown, shown only for the Uploader role — here flagging that no approver exists yet in this department.

5. The rest of the form

Username, Email, Password, First Name, Last Name and Mobile Number. The Username field shows a live placeholder built from the chosen role and department (e.g. uploader.hartron).

Add New User — field specification

Field	Required?	Type / Format	Notes
Role	Required	Dropdown	Every role except Super Admin and Citizen
Department	Required	Dropdown	Single-select, active departments only
Assign Approver	Required for Uploader role only	Dropdown	Populated from active approvers in the chosen department
Username	Required	Text	Placeholder auto-suggested from role + department
Email	Required	Email format	Validated against a standard email pattern

Password	Required	Text (show/hide toggle)	No visible strength rule in the UI
First Name	Required	Text	
Last Name	Required	Text	
Mobile Number	Required	Numeric, exactly 10 digits	Required here — optional in the plain Admin drawer

6. The new user appears immediately

The drawer closes and the new account appears at the top of System Users with no page refresh.

7. Edit an existing user

The pencil icon opens an Edit User modal. First Name, Last Name, Email and Mobile Number are editable. Role and Department are shown locked (read-only) — a Super Admin changes someone's role or department by deactivating the old account and creating a new one, not by editing it in place. For Uploader accounts, the assigned Approver can be changed from a dropdown. An Account Status toggle controls whether the account can log in at all.

Edit User modal — Role and Department shown locked.

Edit User — field specification

Field	Editable?	Notes
First / Last Name	Yes	
Email	Yes	
Mobile Number	Yes	10 digits
Role	No — locked	Shown read-only
Department	No — locked	Shown read-only
Approver	Yes, Uploader accounts only	Dropdown of active approvers in the account's department
Account Status	Yes	Toggle — controls login access

8. Deactivate or activate a user

The red/green icon on a row opens a confirmation dialog first — it names the user and, when deactivating, warns “they will no longer be able to log in.” Confirming applies the change immediately; the status dot, label and icon all flip in place.

Section 3 — All Uploads

1. Every document in the system

A read-only, system-wide oversight list of every document uploaded by every department. Stat tiles — Total Uploads / Approved / Pending / Rejected — are clickable filters.

All Uploads — system-wide document list with stat tiles and full filter bar.

2. Filter bar

Search by name, plus dropdowns for Uploader, Approver, Status and Department, a live “X of Y” count, and a Clear button that appears once any filter is active.

3. Open a document

View opens the same document viewer used everywhere else in the app — original file, full metadata, approval history and relationships to other documents. Approving or rejecting is the department Approver's job, not Super Admin's — this screen is for visibility only.

4. Download Report

A single Download Report button exports the currently filtered rows to an Excel file. Leave the Department filter empty to get a report spanning every department at once; pick one to scope the report to it.

All Uploads — filters

Filter	Options	Notes
Search	Free text	Matches document name, department, uploader
Uploader	Dropdown	Built from uploaders actually present in the loaded documents
Approver	Dropdown	Built from approvers who have decided at least one document
Status	Pending / Approved / Rejected	
Department	Dropdown	Active departments only

Section 4 — Linked Documents

1. Cross-department link requests, system-wide

Lists every cross-department “link to my department” request in the system, regardless of which two departments are involved. Stat tiles — Total Links / Approved / Pending / Rejected — are clickable filters.

Linked Documents — system-wide list with stat tiles.

2. Filter bar

Search by document or department name, a Department dropdown built from whichever departments actually appear in the current links, a Status dropdown, and a Clear button once any filter is active.

3. Table columns

Document (with a type tag), Original Department, Linked-to Department, Status, Requester/Reviewer (each with their date), and View.

4. Open a document

View fetches the complete source document and opens the same viewer used elsewhere in the app, showing who requested the link, who reviewed it, when, and any review comments. This screen, like All Uploads, is monitoring-only for Super Admin — approving or rejecting the link itself happens on the owning department's Approver dashboard.

Section 5 — Master Data Manager

1. Two live categories, side by side

Document Types and Departments — both backed by the database, each showing an “X active · Y total” count and its own + Add control.

Master Data Manager — Document Types and Departments cards.

2. Document Types — Add

Click + Add on the Document Types card. An inline text field opens directly beneath the list with its own Add/Cancel controls; typing a name and clicking Add creates it immediately at the bottom of the list.

Document Types — inline add field open.

3. Deactivate / reactivate a Document Type

The trash icon is a soft toggle, never a hard delete — nothing already used by a document ever disappears outright. Clicking it opens a confirmation modal naming the item; once deactivated the icon flips to a checkmark, and clicking that reactivates it again.

4. Departments — Add

Departments is the only category that opens a full right-hand drawer instead of an inline field, since a department also carries a Description. Submitting shows a confirmation toast, and the new department is immediately selectable everywhere a Department dropdown appears in the system — including the Add User drawer in Section 2 and the Role User Caps form in Section 6.

Add Department drawer — Departments is the only category that opens a full drawer.

5. Deactivate a Department

Works exactly like Document Types — the same soft-toggle confirmation modal, reversible at any time.

Master Data Manager — category behaviour

Category	Add method	Remove method	Extra fields
Document Types	Inline text field	Soft toggle (deactivate/reactivate)	None
Departments	Full drawer	Soft toggle (deactivate/reactivate)	Description (optional)

Section 6 — Role User Caps (Super Admin only)

Why this section matters. This is the one screen that belongs to Super Admin alone — it sets, per department and role, the maximum number of active accounts that role is allowed to have. Plain Admins can only request a change from their own Cap Requests screen; only Super Admin approves, rejects or edits caps directly.

1. Pending Cap Change Requests

Only shown when at least one request is pending. Each row shows the Department, the Role and who requested it (with the date), the Current Cap, the Requested Cap, and the Admin's stated Reason.

2. Adjust before deciding

The requested number can be edited right there before approving — a ▲ / ▼ / = indicator shows whether the edited value is above, below or equal to the current cap. It cannot be set below however many users are already active in that role/department (shown live as “Min: N”); trying to anyway blocks the approval with an inline error.

3. Approve or Reject

Approve applies the (possibly adjusted) cap immediately and the request disappears from the queue. Reject opens an inline, optional rejection-note field — Confirm Reject removes the request and leaves the note visible to whoever asked.

4. Add / Update Limit

A form directly below the requests table: a type-ahead Department search, a Role dropdown, and a Max Users number field. Picking a department + role that already has a cap pre-fills the current value and shows how many users are currently active in that slot; saving either creates a new limit or overwrites the existing one for that exact department/role pair.

5. Existing Limits table

Every configured department/role cap, one row each. Edit turns the Max Users cell into an inline number field with the same “can't go below active count” guard; Delete removes the custom cap entirely, which returns that department/role combination to the system default cap shown in the page subtitle. The table paginates 10 rows at a time once there are enough entries.

Ayush Department	Approver	5	Edit Remove

Chief Secretary to Govt. of...

Role User Caps — Add / Update Limit form and the Existing Limits table (124 departments configured, system default of 5 shown in the subtitle).

Role User Caps — validation rules

Rule	Applies to	Behaviour
Cap must be ≥ 0	Add/Update form, inline edit, request approval	Blocked with an inline error otherwise
Cap cannot go below active user count	Inline edit, request approval	Live “Min: N” hint shown; blocked if violated
One cap per department + role pair	Add/Update form	Saving an existing pair overwrites its value, does not duplicate
No custom cap set → system default applies	Every department/role not listed	Default value shown in the page subtitle
Rejection note	Cap request rejection	Optional — visible to the requesting Admin

Section 7 — Full MIS Report

1. The complete, system-wide audit log

Titled User Audit History — every login/logout, upload, approval, rejection and administrative change across the entire system, with no department scoping (unlike the Nodal Officer's version of this report, which is limited to their own departments).

Chief Secretary to Govt. of...

Full MIS Report — system-wide User Audit History.

2. Filter bar

Free-text search (matches user name, username or action), an Action dropdown populated from the distinct action values actually present in the logs, a From/To date range, and a Clear button once any filter is active.

3. Table

Timestamp, User (name + @username), Action — newest first. The total-entries count shown top-right of the table always reflects the full unfiltered total, not just what's currently visible on screen.

4. Export CSV

Re-fetches every matching page for the current filter/search combination (100 rows at a time behind the scenes) and downloads the result as mis-audit-report.csv. Apply filters first, then export, since only the matching rows are included.

5. Paging through history

Previous/Next controls appear below the table once there are more than 10 entries, so the full history can be stepped through without loading it all at once.

Full MIS Report — filters

Filter	Options	Notes
Search	Free text	Matches actor name, username or action
Action	Dropdown	Populated from distinct actions present in the logs
From date	Date	
To date	Date	Combined with From date as an inclusive range
